**NRC** Conference &  
**REMSA** Exhibition  
2020 *Leading you on a forward track*

**Standard Booth / Linear Booth:** The most common type of booth, linear booths, also known as in-line booths, are arranged in a straight line and have other exhibitors on their immediate right and left, leaving only one side (the front of the booth) exposed to the aisle. Linear booths are commonly 10 ft. x 10 ft. (8 ft. x 10 ft. in this case), and more than one booth space may be reserved to make a larger linear booth. A maximum back wall height limitation of 8 ft. is the norm. Regardless of the number of linear booth used, i.e., 10 ft. x 20 ft., 10 ft. x 30 ft., etc., display materials must be arranged in such a way as to not obstruct sight lines of neighboring exhibitors. The maximum height of 8 ft. is allowed only in the rear half of the booth space, with a 4 ft. height restriction on all materials in the remaining space forward to the aisle. When three or more linear booths are used as a single exhibit space, the 4 ft. height limitation is applied only to that portion of the space which is within 10 ft. of an adjoining booth.

**Corner Booth:** A corner booth is any booth at the end of an isle which has an aisle on two sides. i.e., where two aisles intersect. The maximum height of 8 ft. is allowed only in the rear half of the booth with a 4 ft. height restriction on all materials in the remaining space forward to the aisle. However, when three or more booths are combined and used as a single space, the 4 ft. height limitation is applied only to that portion of exhibit space which is within 10 ft. of an adjoining booth.
